

Melanie Neff

SENIOR SOFTWARE ENGINEER · FULL-STACK ENGINEER

Remote · United States

(+1) 214-693-4813 | neff.mel@gmail.com | melaniemneff

Summary

Senior Software Engineer with 10+ years of experience designing, modernizing, and operating high-scale, API-driven systems supporting thousands of users and millions of transactional events. Proven track record of evolving legacy architectures into scalable, service-oriented systems, optimizing reliability and performance in production environments, and delivering durable technical solutions aligned with business and product goals. Known for clear cross-functional communication and synthesizing engineering, product, and business perspectives into efficient, outcome-driven execution.

Technical Proficiencies

Languages	Go, PHP, JavaScript, Swift, Typescript
Frameworks	Laravel, Vue.js, React
Platform & Infrastructure	Kafka, Terraform, Docker, Twilio, Sendgrid, Gitlab-CI
Databases	MySQL, DynamoDB, MongoDB
AWS	ECS, EC2, API Gateway, Lambda, RDS, SQS, SNS, Cognito
Tooling	Git, DataDog, Composer

Experience

VCV8

Reno, NV (Remote)

SENIOR SOFTWARE ENGINEER

Oct 2025 – Current

- Lead backed engineer designing and building a business validator pipeline by using asynchronous job queueing and extensive LLM prompting with vector store to evaluate inputs based on 8 distinct pillars.
- Implemented a built-in chatback feature for user communication with the LLM and report re-run capability.
- Interfaced with OpenAI, DeepSeek and Gemini LLM APIs
- Compiled data evidence from multiple vetted APIs including FRED, BEA, USCensus, USPTO, and SerpAPIs to bolster LLM analysis and reduce variability.
- Small startup taken live from 0 to 1

Anywhere Real Estate Inc.

Madison, New Jersey (Remote)

SENIOR SOFTWARE ENGINEER / TEAM LEAD

Mar. 2019 – Mar. 2026

- Key engineer on Anywhere's cloud-native Leads Engine, a greenfield microservice-based lead distribution and routing system serving over 300k agents across multiple countries and processing ~35k new leads per week.
- Orchestrated the first large-scale production rollout of the Leads Engine pilot, coordinating cross-team efforts and ensuring a smooth launch across multiple brokerages.
- Led architectural refactors transitioning legacy systems toward scalable, service-oriented, event-driven designs integrated with Kafka and SQS.
- Enhanced Datadog observability by improving application telemetry, refining metric granularity, and implementing distributed tracing across core microservices to accelerate root-cause analysis and incident response.

- Designed high-throughput workflows processing millions of transactions annually with custom configurations for high-profile brokerages like Sotheby's, C21, BH&G, and Coldwell Banker.
- Developed an asynchronous data egress pipeline using Go, TypeScript, Kafka, and AWS Lambda to stream lead and event data to downstream teams for machine learning model training and analytics.
- Served as senior escalation point for complex production incidents and root-cause analysis.
- Partnered with product and business stakeholders to align engineering solutions with operational goals.
- Led the team through agile meetings and scrum performance including increasing sprint velocity and creating and planning work in JIRA.
- Led multiple major tech debt initiatives including design, planning, documenting, work creation, and implementation/execution through to phase out.
- Contributed to the initial development of Anywhere's Leads Engine, building core APIs, business workflows, and backend services that powered lead distribution and routing for agents and brokerages.

No-IP

Reno, NV

SOFTWARE ENGINEER I

Jan. 2018 – Mar 2019

- Built and maintained high-traffic SaaS applications serving a global customer base.
- Developed backend services and REST APIs using PHP/Laravel.
- Implemented frontend systems using Vue.js and modern JavaScript.
- Integrated with Zuora's REST API for subscription and billing management using PHP 7.2 / Laravel 5.6.
- Successfully migrated ~200k No-IP customer's products and data to Zuora using MySQL / Eloquent ORM.
- Created an entirely new payment processing system for No-IP customers using Laravel / [Vue.js](#).

International Game Technology (IGT)

Reno, NV

APPLICATION DEVELOPER (SDET)

May 2016 – Dec. 2017

- Designed automated testing frameworks and internal tracking tools to test highly regulated slot machine games.
- Built a custom gantt chart tool to track team efficiency and roadmap progress.
- Partnered with development teams to reproduce defects, isolate root causes, and validate fixes to prepare games for strict state-level testing.
- Helped define testing standards and best practices across teams to improve overall software quality.

Accenture

San Jose, CA

TECHNICAL CONSULTANT

Oct. 2015 – May 2016

- Developed native iOS applications in Swift for Intel's wearable ecosystem, supporting real-time data visualization and device synchronization.
- Partnered with Intel engineering and product teams to translate hardware capabilities into scalable mobile software features.
- Worked within fast-paced consulting delivery cycles, balancing client expectations, evolving requirements, and production readiness.

Education

University of Nevada, Reno – B.S. in Computer Science Engineering (Minor: Mathematics)

PUBLICATION

Micro-Service Based Architecture for the NRDC – IEEE INDIN 2015
